Sprint Planning Phase 3 (Sprint 1)

We hope to start to get our backend finished and start getting the templates for a main views and start making the ui for those views.

Isaac: I will work on making the general template for all of views. Such as the header and footer and all the parts that go into that

Jason: I will continue to learn react and use the knowledge gained from that to start implement barista view. I will also work on documenting throughout this sprint to keep our documentation up to date.

Zach: I will continue to learn react and use what was learned to build the UI for the customer view and start geting some of logic inside of that working

Jacob: I will work towards finishing up our backend and do more research and to getting authorization running for our website.

We hope to get our manager view to finished up and the customer view finished so we can focus on the barista and cashier view

Isaac: I will start working on the manager view and help with other issues throughout the website.

Jason: I will continue to keep our documentation up to date and to do more research required to get the barista view up and running.

Zach: I will continue working on the customer and cashier view to finish up the UI and the functionality.

Jacob: I will continue cleaning up the backend and keep working towards getting authorization working. All while helping other along in their work.

Sprint Planning Phase 3 (Sprint 3)

We hope to finish our app's functionality a week before this phase is due. We will then take the last week to fix bugs and style the entire site.

Isaac: I will continue my work on the manager view. I will also help with other views that need work and continue to debug other things. I will also create a logout button.

Jason: I will revamp our documentation. I will also create the barista view. I will continue to help where needed.

Zach: I will continue work on the cashier view and create the customer view. I will also continue working with others in case help is needed.

Jacob: I will create a logout feature. I will also fix authorization and continue maintenance on the backend.
